

Investment Portfolio Profile and Suitability

The ISASA Protector Fund is a global Reg. 28 compliant multi-asset class solution designed to maximize the probability of success in meeting each of the three investment objectives individually as well as collectively.

The investment strategy is a specialist asset allocation approach implemented through multi management framework. Portfolio construction and strategy selection is primarily towards minimizing the risk of not meeting the future expected liabilities (the inflation linked income stream).

The Fund is well diversified and primarily invested in traditional asset class portfolios. Alternate investment strategies such as hedge funds will be selected for additional capital protection.

Notes

- Total Expense Ratio (TER): The percentage of the value of the portfolio that was incurred as expenses relating to the administration (charges, levies and fees) of the portfolio. TER is calculated over a rolling one year period (or since inception where applicable) and annualised to the most recently completed quarter. The TER as at the end of June 2018 is calculated using a rolling one year period. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs. Transaction cost (TC): The percentage of the value of the portfolio that was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction costs are a necessary cost in administering the Fund and impacts returns. It should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Calculations are based on actual data where possible and best estimates where actual data is not available. Total investment charge (TIC): This percentage of the portfolio was incurred as costs relating to the investment of the portfolio. It is the sum of the TER and TC.
- Past investment returns are not indicative of future returns. All returns are before deduction of Alexander Forbes Investments' policy fees and performance fees, but net of other expenses. Returns for periods exceeding one year are annualized and all returns are quoted in Rands.
