

ISASA High-Medium Growth

August 2017

Investment Portfolio Profile and Suitability

The ISASA High/Medium Growth portfolio has a fairly high allocation to growth assets. The portfolio is well-diversified through alternative asset classes and strategies such as inflation-linked bonds, fund-of-hedge funds, SRI funds and absolute-return-targeting portfolios. As a result the ISASA High/Medium Growth portfolio is expected to have lower volatility relative to similar portfolios targeting a high return, but with a good chance of achieving the objective over the long term.

Inception Date

Notes

1. Total Expense Ratio (TER): The percentage of the value of the portfolio that was incurred as expenses relating to the administration (charges, levies and fees) of the portfolio. TER is calculated over a rolling three year period (or since inception where applicable) and annualised to the most recently completed quarter. The TER as at the end of June 2017 is calculated using a rolling three year period. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs. Transaction cost (TC): The percentage of the value of the portfolio that was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction costs are a necessary cost in administering the Fund and impacts returns. It should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Calculations are based on actual data where possible and best estimates where actual data is not available. Total investment charge (TIC): This percentage of the portfolio was incurred as costs relating to the investment of the portfolio. It is the sum of the TER and TC.
2. Past investment returns are not indicative of future returns. All returns are before deduction of Alexander Forbes Investments' policy fees and performance fees, but net of other expenses. Returns for periods exceeding one year are annualized and all returns are quoted in Rands.
3. The portfolio structure was changed in February 2012 and as a result the benchmarks have been revised. Prior to that date the benchmarks were as follows : 40% SWIX +10% Composite Benchmark (Old Mutual Absolute Stable Growth*) +8.5% BESA All Bond Index +10% Composite Benchmark (Real Return Focus) ** + 5.5% (90% Barclays BESA SA Government ILB Index+ 10% SteFI) +2% (70% BESA All Bond Index + 20% SWIX + 10% SteFI) +4% SteFI +20% (Global Market Index Composite) * Stable Growth uses 40/30/20/10 Cash/Equity/Bonds/ILBs, wherever they form part of a composite benchmark in a risk-profiled portfolio. When markets are very positive OM Stable Growth may underperform market linked benchmark due to smoothing and when markets are very negative, OM Stable Growth may outperform market linked benchmark due to smoothing. **Real Return Focus uses 40/30/30 Equities/Bonds/Cash, wherever they form part of a composite benchmark in a risk profiled portfolio.
4. The Policy fee consists of a flat fee of 0.36% p.a for local assets and 1.00% p.a for global assets.
5. Kindly note that with effect from 1 April 2017, all Alexander Forbes Investments South African equity benchmarks have changed from the FTSE/JSE SWIX to the FTSE/JSE Capped SWIX ALSI Index.
